

Abstract

Title: Correlation of evaluation criteria of non-investment programs of the Ministry of Education, Youth and Sports on the example of Czech Badminton Union

Objectives: The aim of this work is to determine the degree of dependence of the evaluation criteria of national sports associations on the amount of funds received from the non-investment programs of the Ministry of Education, Youth and Sports.

Methods: In this thesis was used a method of analysis of secondary data, namely documents issued by the Ministry of Education, Youth and Sports and the Czech Badminton Union. For the calculations in the practical part of this thesis was used correlation and regression analysis. The MS Office Excel tools were used to determine the correlation coefficients - Regression function and then the Solver function to predict model situations.

Results: For all the evaluation criteria surveyed in this thesis, the positive dependence to income of Czech Badminton Union was confirmed. The increase in the membership base, the number of national team players or the number of players included in regional youth training centres cause the increase of volume of financial contributions received from the non-investment programs of the Ministry of Education, Youth and Sports. The most significant value was measured by the overall membership base of the national sports association.

Keywords: national sports federations, grants, badminton, dependence, regression
